| Team ID | PNT2022TMID13313 |
| Project Name | AI based localization and classification for skin disease with erythema |
| Maximum Marks | 4 Marks |

Solution Architecture:

The process of bridging the gap between business issues and technological solutions, known as solution architecture, is intricate and has numerous sub-processes. Its aims include:

- Find the greatest technological remedy to address current company issues.
- Describe to the project's stakeholders the software's structure, traits, behaviour, and other features.
- Define the solution's requirements, development stages, and features..
- Specifications on how the solution is defined, maintained, and delivered should be provided.
